

IS YOUR DESIGN TEAM **IN SYNC?**

"Teamwork" light painting by Jurkunskauc, Amsterdam

With Building Information Modeling (BIM), designing in teams becomes a challenging task.

- ▶ Would you prefer **REAL-TIME** collaboration, so you don't have to wait in line to synchronize?
- ▶ Would you prefer **DYNAMIC** team setup, to enable the best available division of labor for any 2D/3D workflow?
- ▶ Would you prefer **SAFE** data sharing, with server-level data management, working on any type of network?
